Imagine A...Technology Black Out Day
Examining the Impact of Technology in Schools

April 20th, 2005

Join thousands of teachers, students and parents of K-2, 3-6, & 8-10 students as they imagine one full day without technology. With lesson plans and activities that support state curriculum standards, participants will take a journey through time that examines the impact of technology on our society and begin to imagine the possibilities for their contributions in the 21st century workforce.

"Imagine A Technology Black Out Day" can be a short exercise or a more comprehensive process of self exploration. Beginning with a brief overview of how things have drastically changed in the last few decades with a technology timeline, students will develop their own definition of technology and analyze the impact that innovation has had on their daily lives and our nation.

The curriculum addresses specific state standards in social studies, government, and language arts and also reinforces efficacy, innovation, traditional literacy and technology skills.

We encourage you to get involved!
Go to the Website below for enrichment ideas, lessons, and specific state standards. Teachers will sign-up to participate, students will submit their findings, and parents will be given homework to talk about the technologies they used in school!
